Education

University of Central Florida

M.S., Data Analytics. GPA: 3.90

Orlando, FL

August 2026

University of Central Florida

B.S., Computer Science. GPA: 3.89

Orlando, FL

December 2024

Experience

Net Conversion

Analyst

Orlando, FL

July 2025 - Present

- Develop forecasting and risk-classification frameworks, comparing projected transactions against business targets and identifying key takeaways to guide budget allocation decisions.
- Automate identification of non-priority leads submitted through digital ads by implementing logistic regression models, resulting in optimized processes for the sales team.
- Build dashboards and audience insights to support data-driven optimization, performance narratives, and recurring business review materials for decision-makers.

UCF Institute for Training and Simulation

Research Intern

Orlando, FL

Dec 2024 - Feb 2025

- Designed an AI training assistant that automated personalized learner feedback, improving training efficiency by 25% through Python-based machine learning workflows.
- Researched AI-driven training solutions for virtual education environments and summarized findings for project stakeholders, contributing to a 15% increase in user engagement.

Relevant Projects

Bidding War Simulation

Machine Learning

Orlando, FL

December 2025

- Built three LLM-powered bidding agents using the OpenAI API, each following a distinct strategy driven by custom prompt design.
- Integrated the agents into an interactive UI, allowing users to observe and participate in live bidding against the AI agents.

Wildfire Risk Survival Model

WiDS Global Datathon

Orlando, FL

Apr 2026

- Ranked top 25% worldwide by developing survival models to predict wildfire impacts on evacuation zones, producing probability estimates across multiple time horizons.
- Achieved ~0.97 evaluation score using Random Survival Forest and Gradient Boosting Survival models, with calibration evaluated through weighted Brier scores.
- Translated model outputs into risk-based interpretation, explaining how time-progressive probabilities can support preparedness and resource allocation decisions.

Tiktok Sentiment Analysis

UCF Analytics & Decision Control Lab

Orlando, FL

Jan 2023 - Jun 2023

- Built a Python-based scraping and analysis tool to collect TikTok metadata, comments, and videos for sentiment analysis research.
- Leveraged NLP techniques to classify user comments, identify engagement trends, and communicate research findings at the Student Scholar Symposium.

Skills

Data Analysis & Visualization: Matplotlib, Seaborn, NumPy, Pandas, Scikit-Learn, TensorFlow, BigQuery

AI/ML: LLMs, OpenAI API, Prompt Engineering, Generative AI
